

Marrakech Walls is a durable, 100% mineral, lime-based plaster paint that offers luxuriously soft, textured architectural finishes. It allows for a single coat application, making it easier and faster to achieve your desired wall texture, colour depth, and variation compared to regular plaster finishes. From a sturdy concrete look to an exclusive Tadelakt finish, Marrakech Walls suits both walls and ceilings.

Marrakech Walls may be the perfect solution if you admire the sleek, modern appearance of concrete ciré but aren't ready for a full renovation project. It delivers a similar aesthetic and durability without the hassle and expense of installing concrete ciré. This versatile paint can be applied to a variety of substrates, including painted walls, newly plastered walls, (non-woven) wallpaper, lime plaster, concrete plaster, absorbent mineral stone, reinforced concrete, drywall, plaster blocks, wood, and other mineral surfaces. Ensure that the surface is properly prepared before application.

This eco-friendly textured paint is available in over 180 colours, featuring subtle nuances and variations, all with a hint of muted grey characteristic of lime-based paints. Always read the technical data sheet before applying Marrakech Walls.

MARRAKECH WALLS

Textured paint with natural colour nuances

A Marrakech Wall in your unique style

When applying Marrakech Walls paint, you can achieve different results depending on the technique used:

- A finish with subtle colour nuance with one layer of Marrakech Walls
- Two layers of Marrakech Walls for added texture and dimension
- Create a Tadelakt look with a soft shine by finishing with Lime Soap
- If you want to achieve a high-gloss look, apply Italian Wax on top
- Enhance durability with the water-repellant and washable Dead Flat Sealer protection

Additional options are possible, as your chosen technique greatly influences the final colour, appearance, shine, and texture.
